Senior Software Engineer

Versatile technical leader accomplished in development of innovative software solutions.

Experienced software developer, a technical leader with demonstrated success excelling in dynamic, fast-paced environments within multiple industries. Expertise managing development and implementation of software solutions, as well as effective stakeholder communication and status reporting. Solutions-oriented professional with experience directing high-performing teams and extensive knowledge of agile methodology and development processes. Focused on delivering exceptional technical leadership and driving timely project results.

*Full Cycle Software Development / Project Management / Stakeholder Communication
System Architecture / Troubleshooting & Issue Resolution / Team Building & Staff Development*

TECHNICAL PROFICIENCIES

Programming: Ruby, Rails, JRuby, Flutter, Dart, Python, Sinatra, Flask, Javascript, NodeJS

Tools: AWS, MySQL, Postgres, Redis, MongoDB, EventMachine, JSON-RPC, PostgreSQL, Rack, Grape API, Elasticssearch, Docker, EC2/EBS

CAREER HISTORY

Lead Software Developer (2016 – Present) Labrador Omnimedia, Santa Rosa, US
Technical Scope: Ruby, Rails, Javascript, C#, Swift, Flutter, Dart, AWS, EBS/EC2

Direct design and development of food and beverage management software, with web back-office and ability to connect to multiple POS systems and manage wine inventory in real-time. Lead all development operations including back-end development, deployment and backup strategies, as well as new platform integration. Communicate with business users, execute efficient testing and debugging, and oversee defect management.

Key Achievements:

- Ensure effective technical leadership, coaching junior team members in best development practices, key technologies and API integrations, legacy codebases support and lift-ups

Lead Software Developer (2014 – 2016) ProFinda, London, UK
Technical Scope: Ruby, JRuby, Python, Rack, Grape API, Redis, PG, Elasticssearch, Docker

Spearheaded team of data engineers and researchers, leading full cycle software development of applications utilizing Artificial Intelligence, Natural Language Processing, Machine Learning, and Algorithmic Suggestions, enabling organizations to become more efficient. Teamed with research and development senior management to gather requirements and acceptance criteria. Assigned team tasks and priorities, reviewed code, directed workflow, and communicated progress, issues, and resolutions to business stakeholders.

Key Achievements:

- Developed and implemented machine learning, collaborative search, and natural language processing architecture from scratch.

Director of Engineering (2012 – 2014) Helios Technologies, Odessa/Kyev, Ukraine
Technical Scope: Ruby, Javascript, Rails

Oversaw team of programmers, managing projects including ID.net secure payment platform, TrafficFactory analytics and advertisement platform, and Ant.com social-based search engine.

Vlad Shvedov

Page Two

Recruited, onboarded, and trained team, mentoring and coaching associates in best development practices, as well as reviewing code and investigating new technologies. Liaised with project stakeholders, management, and clients, providing schedule information, issue reporting, and status updates.

Key Achievements:

- Initiated Odessa branch and successfully built high-performing team.
- Conceptualized and developed performant and scalable ID.NET architecture.

Consulting contractor / Software Developer (2008 – 2016)

Multiple Engagements

Freelance activity, helping and consulting multiple Silicon Valley startups and building clients network.

Technology – Ruby, Rails, Javascript, MySQL, PostgreSQL, Redis

Select Projects

Lead Software Developer – Online Marketplace at Modnique.com

Technology – Ruby, Rails, Javascript, PostgreSQL, Redis, EventMachine

Client – Modnique

Managed software development team, providing technical coaching and mentoring, as well as reviewing code and performing data analytics and processing.

- Utilized Data/Context/Interaction (DCI) architecture and Dokku/Docker/Ansible/Vagrant deployment.
- Successfully integrated Google Analytics (REST API) and Bronto (SOAP API) and implemented asynchronous agent tracking emails and link openings.

Lead Software Developer – Workforce Marketplace (2005-2008) at TopTal

Technology – Ruby, Rails, Javascript, PostgreSQL, Redis, Backbone.js

Client – Toptal

Employee number one.

Spearheaded team of developers designing and developing web-based platform utilizing DCI, analytics, and OLAP platform development.

- Optimized data mining, and refactored and improved legacy code.
- Implemented complex architectural solutions and Rails application management.

Lead Software Developer at Y8.com

Technology – Ruby, Rails, Javascript, Redis, JSON-RPC, MySQL, EventMachine

Client – Y8

Oversaw core development and evaluated and refactored code.

- Piloted high-load optimization through implementation of high-load resistant backend.
- Created asynchronous voting system.

EDUCATION

Master's Degree in Economics / Odessa National Academy of Food Technologies Odessa Ukraine
